For the complete pet

Start with a solid foundation

Dental disease is the most common disorder of pets, affecting almost **70% of all cats and 80% of dogs over 2-3 years**. Periodontal disease is the most common clinical condition occurring in adult dogs and cats, and is entirely preventable. By three years of age, most dogs and cats have some evidence of periodontal disease.

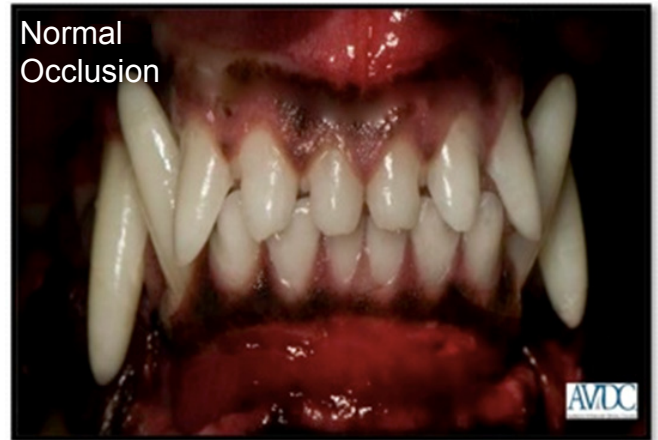

Unfortunately, other than bad breath, there are few signs of the disease process evident to the owner and professional dental cleaning and periodontal therapy often comes too late to prevent extensive disease or to save teeth. Periodontal disease has been connected to kidney disease, heart disease and other major issues including cancer.

 **Oral Guard** can slow down the progression of this disease and help

reduce the need for more unnecessary and costly tooth extractions. It has also been designed to assist the veterinarian in helping support the natural acceleration of wound healing following extractions and or surgery within the oral cavity, thereby reducing the need for long term use of NSAIDs, or antibiotics.

Oral Guard can:

- Assist in wound healing following extractions and or trauma
- Help reduce localised and cellular inflammation
- Help destroy harmful bacteria in both the oral cavity and the GI tract
- Help reduce Oxidative stress at a cellular level
- Help support / modulate the immune system.

Ingredients:

per every 600mg capsule
 Golden Flaxseed – ALA (beneficial fatty acid)
 Proprietary yeast source of nucleotides, peptides and amino acids
 Omega-3 fatty acids; EPA + DHA (beneficial fatty acids from fish oil)
 Saccharomyces cerevisiae
 Ganoderma lucidum
 Synozyme – Proprietary Plant based enzymes
 Sodium bicarbonate
 Freeze Dried Melon rich in SOD and Catalase
 Dentalzyme – Proprietary plant-based enzymes

Approved in Canada as a Veterinary Health Product NN.N0C8

ALL Ingredients are GRAS approved for use in animal supplements in the EU and USA
