## For the complete horse

### Start with a solid foundation

Horses hooves are exposed to high levels of concussive impact and are susceptible to infection. **HoofPro** supports a strong, healthy hoof by supporting healthy nutritional breakdown and stimulating protein synthesis and cellular function and thereby assisting in growth of hoof tissue. **HoofPro** ingredients with evidence based research help support blood flow to the lamina. Beta glucans in **HoofPro** are known to support the horse's immune system.

A strong immune system allows the horse to resist infection and reduce chronic inflammatory changes. Natural antioxidants in this nutritional matrix have the potential to reduce structural damage to cells caused by free radicals, toxins and environmental stresses.

#### Ingredients:

- Golden Flaxseed – ALA (beneficial fatty acid)
- Proprietary yeast source of nucleotides, peptides and amino acids
- Gluten Free Oat Flour
- Saccharomyces cerevisiae
- Alkoseal - Proprietary chelated selenium
- Ganoderma lucidum
- Vitamin D2

#### Serving Suggestions:

Daily, four scoops (1 scoop = 10g) mixed into the feed (not hay), add water and ideally allow to soak for 30 minutes before feeding. Dry feeds should be wetted to minimise the risk of choke.  
 Note: Hoof growth is slow with total length of the hoof replaced in one full year. Therefore benefits may not be evident until at least three months of daily use.

## Functional Foods to Support a Healthy Hoof

### Antioxidants

Antioxidants - Free radicals are formed daily which are damaging to the whole body. Antioxidants act as scavengers, helping to prevent cell and tissue damage that could lead to a breakdown of the hoof production process, and suppression of the immune system.

### Omega 3

Omega 3 - Are required for the synthesis of inter cellular connecting substances connecting horn cells, and strengthening the barrier in the stratum corneum (the actual hoof capsule). The hoof capsule consists of wall, sole frog and bulb.

### Biotin

Biotin is an important vitamin supplement that supports hoof health. Flaxseed delivers bioavailable sources of this vital vitamin B7, which helps strengthen and increase hoof growth.

### Probiotics

These are required to maintain a healthy gut environment where most of the body's immune system is located.
